A means of identifying, recording, and tracking communication impairments The Cognitive-Communication Checklist for Acquired Brain Injury

Shella MacDonald & Associates

1. University of Tenents, Adjunct Carbons

CHALLENGE

 More than TSNs of included sale with proposed brain injuries (AE) will expenwhile communication difficulties that can dravipt excessful return to work. school, family, conveniency, and social participation. Most are cognitivepotentialneation impainments.

- International standards and guidelines recommend referral to evidence. based speech language perhology interventions for these individuals.
- There is a conscal need for clear selectal enters and consisters terranology. to promote understanding of communication impairments and to ensure Sex and equitable access to communication intervention after ARI.

OBJECTIVE

· To obtain feedback from speech-language pathologists, multidisciplinary referred sources, individuals with brain injuries, and their furnities regarding the utility, clarity, and comprehensiveness of a referral tool designed to identify cognitive communication impairment.

METHOD

- . The Cognitive-Communication Checkfult for Acquired Brain Injury. (CCCARR) is a 1 page referral tool summarizing 45 communication diffi-culties in 10 areas of cognitive communication functioning that was developed based on evidence symbols, plot testing, and expert
- A survey was conducted of 113 ScPs, 33 multidisciplinary referral. sources, and 41 individuals with lived expenence of brain injury. Distribution occurred through professional organizations, hospitals, brain Injury services, and community support groups.
- . It's survey questions related to the need, comprehensiveness, clarity. and utility of the CCCASI using the response options: Strongly Agree, Agree Somewhat, Disagree, Strongly Disagree, and Unions.

Speech-Language Pathologists

113 SLP respondents from Ecountries represented the full range of such settings.

(CCCABI)

Percentage of Respondents who Strongly Agreed or Agreed Shella MacDonald M.CLSc.¹, Speech-Language Pathologist.

SURVEY RESULTS

CONCLUSIONS

- · A referral tool is necessary to assist health professionals and those with lived experience of brain injury in identifying the full range of communication difficulties after ABL
- The CCCASS was supported as a clear, comprehensive, and accessible format for consistent identification of communication implanment that could proincts timely referral to speech language pathology services, recording of besiding communication profiles, and tracking of general communication data across the continuum.
- Key uncertainties relate to potential selection bias, unique needs of tighticific referral sources the physicians may require a more brief theolists and
- Potential next steps include a broader survey of international colleagues. incorporation of specific feedback from climitians and individuals, and galoting of the CCCAB in research protocols.

Chapter 4

Catalyst characterization: characterization techniques

G. Leofanti a, G. Tozzola , M. Padovan , G. Petrini , S. Bordiga , A. Zecchina

* ENICHEM S.p.A., Centro Ricerche di Novara, Via Fauser, 4, 28100 Novara, Italy
* Department of Inorganic, Physical and Chemistry, Università degli Studi di Torino, Via P. Giara, 7, 10123 Torino, Italy

1. Characterization techniques

1.1. Introduction

The most remarkable difference between catalysis during the 50s and 60s and nowadays is the remarkable development of characterization techniques.

Various factors contributed to that growth:

- (i) need of having a better control on the catalyst in order to meet the requirements for further optimization of processes already in operation and/or for realization of new processes;
- (ii) appearance of new classes of solids with catalytic properties and peculiar characteristics (zeolites, zeolite-like materials, oxides with controlled porosity, very high pore volume silica, superacids, etc.);
- (iii) technology and computer development have placed on the market more powerful and friendly to use versions of known techniques (FT-IR, FT-Raman, calorimeter, etc.) or new techniques, often initially developed for other sectors use (XPS, EXAFS, SIMS, ISS, EPMA, etc.).

To realize how large is the growth of the characterization influence in the development of catalysts it is enough to look at scientific magazines and catalysis congresses proceedings.

Because of the tremendous variety of dispos-

able techniques it is impossible to review all of them in few pages. So we have to decide what techniques to describe and what to treat deeply.

The choice has been done on the basis of:

- (i) applicability to real catalysts (so spectroscopies on single crystals like LEED, UPS, etc. were rejected);
- (ii) easy access, either in cost and/or in necessary facilities (however also techniques both expensive like XPS, NMR, TEM and of difficult access like EXAFS, requiring synchrotron radiation, will be reported because of their importance);
- (iii) applicability to many different systems (then little space will be devoted to Mössbauer and PAS, much more to N₂ adsorption, IR spectroscopy and temperature programmed techniques, etc.);
- (iv) informative content, or capacity to give a manifold information (multipurpose techniques like IR spectroscopy are preferred).
- On the whole 35 techniques, i.e. a number enough to face adequately nearly all the problems of daily practice, are described; on a few other (about 20) a short description is given. For all of them an adequate bibliography useful for a first deepening will be given.
- Techniques have been grouped on the basis
 - 1. morphology and physical characteristics,
- surface characteristics,

Catalysis communications abbreviation

(or 20.80 cm x 25.40 cm) in TIF file format, JPG, PNG or EPS with a resolution of at least 300 DPI for pixel -based images. When an article is retracted, a warning of retraction will be published containing information on the reason for the return. Research data are defined as materials and information used in the experiments that allow the validation of the conclusions taken in the article, including business data produced by the authors of the study and any other necessary materials to reproduce or replicate the results. Each daily also has an specific poetry on previous publication. It is not appropriate for an author to reuse the wording of other publication, including the previous publication is mentioned or no. In the setting of tables, the authors must keep in mind the type of the ACS cathum type (17.8 cm £ - 23.5 cm) and the width of the column (17.8 cm) 8.5 cm) and should make the tables in accordance with the limitations of these

dimensions. B. Cynamic and equilibrium data the cynamic data report and connecting data to the equilibrium for protein, nucleic and other spirit should preferably include a description of the identity of the Catalyst or ligament modifications, such as mutation, pus-translational modifications or other modifications made to facilitate the expression and the purification. The necessary information (ICF). It is not forgotten to promote their research and related data in social moms, in conferences and in academic communication networks. Pons for all solo pools, a molecular weight estimate should be provided by a suitable motto - for example, chromatography EXCLUSION OF SIZE, including column details, eluents and calibration patterns, ca more significant interrelationships can be transmitted by the tabular format. At least one author must be designated with an asterisk to indicate the person to whom readers can send correspondence. References to the mothers on which the software is also based must be provided. Figure a caption that provides the number of the figure and a brief description should be included below each figure. ApãaNDICE 1: Preparing for shipping, we develop Public authors and library. New catalysts in which the screening of new catalysts is reported, the authors must provide a mass swing for all reactions (using, for example, an internal pattern in their techniques). Structures should be produced using a drawing program like Chemdraw. The correspondence and refutation of appearance in the article (not only in support information) indicating that compounds have not been isolated. Perspectives usually have 20 pages in length, depending on the covered tonpical. Special efforts will be made to accelerate the revision and publication of letters. The tabulation of experimental results is encouraged whenever it leads to a more effective presentation or the economemic use of the space. The authors must include an introductory declaration describing the scientific motivation for research. The sequence of letters should continue by line and not a column. It is highly desirable to report the reaction rate for catalysts as a frequency of rotation or specific mass activity or, for catalysts as a specific surface activity. Image files must be sent as TIF, TIF, PNG or EPS files with a resolution of at least 300 DPI for pixel -based images. The rods in the table by letters of overshally superstradia. For compound libraries, HPLC branches must be sent as a proof of purity. Schemes. Web manuscript publication may occur weeks before the date of the cover cover. Provides a detailed response to the comments of each reviewer, as described in section IV, the revised manuscripts. If you want to be considered only for the cover according to the DIARY, cover the question at ACS Paragon Plus. Support information must be sent at the same time as the manuscript. For organism involving DNA, RNA oligonucleotans, their derivatives or imitators, purity must be established using HPLC and mass spectrometry in the mother. Sufficient experimental details should also be included to allow another researcher to reproduce the sound. An output of the output must be retained if requested by an editor. This includes changes in the file type, resolution, color space, source, scale, line weights and layout (to improve the legibility and professional appearance). If the present address of an author differs from that in which the work was done, the current address should be provided in a note at the end, for example, "Address present for [initials of the author", followed by present address. Any grain (grain of the figure, scheme or equation) that appeared in a previous publication must include a line of cront to by citing the original source. The authors of the Open Researcher and Taxpayer ID (ORCID) who present reviews of manuscripts are required to provide their own personal and validated ID before completing the shipping, if an Orcid ID is still not not to be to your User profiles ACS Paragon Plus. The author of the original publication can be to write a refutation. Authors with appropriate software can alternatively use the validation tool for checking in Pathon. Publish a revised versions after pairs is out of controversy. After a manuscript is subjected to the ACS Cathalise, no revised versions can be published on prize servers while being considered by journal, including during review, rendering £, or after acceptance. (or 20.80 cm à £ - 25.40 cm). Many financiers and institutions require institutional affiliates to be identified for all authors listed in the work being subjected. Articles containing seriously failed or erroneous data, so that their discoveries and conclusions can not be considered retracting to correct the scientific record. If a view to the rich of the tatomus is chosen for the manuscript, a timic figure of ellipts should be included in support information. GREAT GREATIALS (groups of structures that do not show reactions) may have a brief subtitle describing their containment. The authors of orgain compounds are required to provide unequal support for the purity and the attributed structure of all compounds using a combination of the following characterization techniques. In letters and articles, the introduction must be a separated section of the article. The elementary dwarf is sufficient. The lines on the list of authors should include all those who made substantial contributions to work. If the text mode is used, separate columns with a guide and use a line feed (return) at the end of each line. The authors can be invited by the editors to send reviews. Data requirements characterization of the compound, experimental and computational authors are necessary to provide sufficient information (as described in more detail below) to establish the identity of a new compound, purity and its performance. Author's responsibility get a file name (PDB ID or NDB ID) peel molecule; the file Must appear in the published manuscript. Summary All articles, letters, perspectives and reviews should be accompanied by an abstract, including an abstract grain (OCD), which should briefly declare the objective of the research (if this is not contained in the title), the main results and the main results and main conclusions. A brief description is required and a nonsense of the actual containment of each file. The letters should not be less than 4.5 points in final format published. Enter your and email address below and we will send your user name select an ACS Research Accounts Materials Research Quemic Research ACS Agricultural Science & Technology Materials ACS Materials APPlied ACS MATERIALS Quãica Quãica Earth and Space ACS ENERGY ACTICS Engineering Auta Ambiental Adimal ACS and Engineering Engineering Engineering ACS & TA ACS SCIENCE AND FOOD TECHNOLOGY ACS INFECTIVE DESIGN ACS Macro Materials Material Pharmacology & Translational Science ACS Physical Chemistry Au ACS Polymers Au ACS Sensors ACS Sustainable Chemistry Bioconjugate Chemist & Design Energy & Fuels Environmental Science and Technology Environmental Science and Industrial Lettas Technology Environmental Science and Industrial Lettas Technology Environmental Science and Technology Environmental Science and Industrial Lettas Environmental Science and Industri Theory and Computation Journal of Medicinal Chemistry Journal of Natural Products Journal of Proteome Research Journal of the American Society for Mass Spectrometry Langmuir Macromolecules Molecular Pharmaceutics Nano Letters Organic Letters Organic Process Research & Development Organometallics The Journal of Physical Chemistry A The Journal of Physical Chemistry A The Journal of Physical Chemistry B The Journal of email acadêmicos em vez de endereços de email pessoais. Propostas mecanicistas, caracterização de intermediários Espécies com múltiplos métodos espectroscópicos devem ser feitos, quando possÃvel, e/ou adequadamente suportados por cálculos teóricos. (Observe que os co-autores não precisam se registrar no ACS Paragon Plus.) As atividades de patentes e os autores de propriedade intelectual sã£o responsã; veis ââpor garantir que todas as atividades de patentes e questãµes de propriedade intelectual sejam resolvidas satisfatoriamente antes da primeira publicação (ASAP 'ou em edição). O método de ensaio e as condições experimentais exatas do ensaio devem ser fornecidas como uma referência ao trabalho anterior, com ou sem modificações ou totalmente descrito se um novo ensaio. Sua inclusão como informações suplementares deve ser observada no parágrafo da ESI no final do manuscrito. Essa evidência ã© necessária para estabelecer que as propriedades e constantes relatadas são as do composto com a nova estrutura reivindicada. A PolÃtica de ACS research provides additional information on data availability data Data quotes and data repositions. After one year, the restrictions of access to your article will be raised and you may share the articles at URL request in social moms and other channels. In addition, it is "superb", "exceptional", "exceptional", "exceptional", "uttleard" or other similar descriptive words, are strongly discouraged. The authors must confirm that only they have the copyright of the work and read and comply with the ACS dissertation and the conditions and procedures established in the ACS Journal Publication Agreement and procedures. Soned state materials, such as heterogeneous catalysts, should be characterized in such a way as to sufficiently describe their structure and composition. The sequences of reactions are called schemes and should be noted that, in general, spectromated and spectroscal data do not constitute proof of purity and, in the absence of elementary dwarfs, additional purity evidence should be provided during the manuscript review. In cases where filtered radiation is used, all efforts should be made to identify residual lines -. Main body of the manuscript. When required by the limits of the structure or length of a dIARY, manuscript models should be used. As far as possible, NMR data resonances must be attributed to the specific quantum functionality. The summary may summarize geomal characteristics of unusual interest, but it should not contain parts of the unit lula. For crystalline samples, information on the crystallization (solvents; MP; etc.) should be included. Administrative considerations: all works should not be in or published elsewhere; The manuscripts will be displayed with the plouring software; information on whether the It was already considered earlier elsewhere; It is not forgotten to list sources of financing and orcid. Examples of insufficient descriptions: ¢ âferences "Porporate Information: Figures S1-S3 ¢ âferences or â € œIn traditional figures, as mentioned in the textâ €. Manuscripts may not contain the words "now", "first", or "no" novel ", nor any number of peãtimo or no. If the final decision -making decision is the adequacy of a manuscript rests only with the editor. It can not make a manuscript login should include the original title of the article and the list of authors, , including doi and details of the correction. As graceful, photographs, illustrations, diagrams and other visuals, they can play a significant role in the communication effectively of their discoveries. The images chosen for the cover will be published at no cost to the author. Text must be legible when the grade is seen in full size. All the work related to consideration to public in the manuscript and the editor informed at the time of the submissive. QUAMIC STRUCTURES QUAMIC STRUCTURES should be produced using a drawing program like ChemDraw. You can also find out more about open access and ACS compliance initiatives. If you will not receive an email within 10 minutes, your and email address may not be registered and may be necessary to create a new Wiley Online Library Account. Cifs can not be supplied as Microsoft Word files, Corel Wordperfect or PDF. Tables, schemes and figures must be written as table S1, Figure S1, Scheme S1, etc. Equals, data, parano meters/coordinates geomal or other essentials the reproduction of computational results (or appropriate reference when when in open literature) must be provided. If the manuscript is accompanied by any support file files for publication, these files will be available free of charge to readers. Provide these elements in the order listed: a paragraph explaining why your manuscript is appropriate for ACS's Cathalise. Language and editing services a well -written article helps to share your results more clearly. These information is provided to reviewers during the peer review process (only for review only) and are disposedable for published labor readers (for publication). Disclosure of previous shipments: If the manuscript was previously rejected by the CAT's Cathalise, it provides the number of manuscript and a detailed response to the comments of each reviewer. Structural and sequence data for nucleic proteins and coordinated nucleics and structure factors for proteins determined by NMR should be deposited in the protein database, research collaboration for bioinform Structural Tica of Rutgers University. The authors can not review these prime. Where the resolution at ± 1 ¢ â Â ± 2 duples occurs, the identification of the space d for each line such as dã® ± 1, dã® Â ± 2 provides a measure of the quality of the diffraction pattern. Details such as abbreviations, experimental conditions, etc., when applicable, the number of imaginary frequencies must be reported to identify strict structures. CIFs must be sent at the same time as the manuscript is sent by the web, with the designation of support files for publication. Tables of distance and interactive essentials are not required, but they can be subjected (the mother information for standard structural components should not be included). See also the press release on the ACS in the Crosscheck initiative. Type of graph chart of grain table (OCD)/abstract grain for specifications. It must be sent within 18 months from the date of publication as stuffed as possible in the original article. (c) the compounds of state materials are in this category are those who do not exist in solution. Evaluating as a whole, the evidence presented in support of the claims made by the authors. Research data underlying their articles publicly at the time of publication. Where the compound is molecular, the authors must provide data to unequivocally establish their homogeneity, purity and identification. The magazine is dedicated to reports of new and original experimental research on mollets, macromolith or catalytic materials (displaying catalytic turnover and parano ¢ Cinamal meters Fundamental. If the expression is long, it may be included in the electrical supplementary information, rather than in the main text of the manuscript. Possible space groups can also be listed if the data justify it. The views usually range from 3 to 6 pages of length and not the abstract included. DISCLOSURE OF THE POLICY OF PRIVATE PUBLIC PUBLIC PUBLICATION AND ACS OF ACS CATTOM: PRINTING POLICY POLICY AUTHOR LIST WITH Affiliations: It must correspond between the manuscript file and A Electrical input in shipping, choose manuscript type: letter, article, perspective, review, view point, account, correspondence or addition and summary: be clear and concise, reflect the The nobase and the containment of the article Publication as well as possible possible usually occurs within a few days after the receipt of the proof of proof of the p necessary. A fully indexed pess differing standard that agrees with crystal data can be used to establish purity and homogeneous composition. When possible, representative spectra must be provided in support information. Guidelines for the characterization of organ compounds (a) sample quality for new substances, the evidence of purified sample homogeneity should be included. For this reason, the authors of cards must ensure that the manuscripts are in the final form and without errors when sent. Refers can be provided in any style, but should be complete, including tankers. It should be placed on a table note, not in the title. Our service of no. Letter of presentation must follow all manuscript shipments. Ensure that any use and abbreviations used to the text in the text agree with those in the work of art. If a mentioned reference has already appeared on the web, indicate that it is published electronically (â € œAasapâ € for the journal of the ACS) and provides the number of DOI for convenient access. Problems are not solved and emerging areas should be highlighted. Schemes Each scheme (sequels of reactions) may have a brief subtitle describing its containment. The art of the cover at the time of the presentation of a revised manuscript, the authors of the ACS Cathalise are encouraged to send images to be considered for use on the cover of the magazine cover or supplementary cover. The components of the manuscript text components should clearly and concisely reflect the nock and the containment of the manuscript text components should clearly and concisely reflect the nock and the containment of the manuscript text components of the manuscript Characterization of most of the sample may require determination of composition and quantum size in large parts of the sample. Security: Authors should emphasize any unexpected, new and/or significant risks or risks associated with the reported work. Sufficient data must be provided to identify and verify the structure of such compounds, and original preparation must be cited in experimental section or support information. The publication material that has been used in reports to research sponsors is acceptable, provided that one or more of the authors have copyright. After the conclusion of any related investigation, and when an end determination on the result of the article is made, the expression of concern can be replaced by a warning or correction RETIREMENT. Instead, an estimate of the detection limit based on sensitivity and testing of test errors should be provided. To obtain information on the necessary components of different types of refinement, see the Rabbi Guide to the ACS style. After the publication in ACS Catalysis, the authors are advised to add a link from the prize to the published article through digital object Identifier (DOI). Note that permission should be obtained for use of all images and figures. Observe the use of a prize server explicitly explicitly in the presentation letter and, as appropriate, indicate how the manuscript was adjusted/updated between the practitioner ACS CATTOM. This includes data such as fields of Field of Strength and equations that define the model (or refinements to where this material is disposed of in open literature). (c) diverse numerical listings of characteristic spectroscrical data should be included to support attributed structures, changes in functionality, unusual chromes, etc. During the shipping process, the corresponding author must provide a declaration in name of all the authors of the manuscript, describing potential sources of financing and or management relationships, this can constitute conflicts of interest. The accepted manuscripts will be published on the ACS Publications website, as soon as the pamin tests are corrected and all the authors' concerns are resolved. Athanic coordinates and structure factors for all structures must be released immediately after the publication of the article. The authors can be invited by the editors to send perspectives. Readers who detect errors of consequences at other people's work should contact the corresponding author of this work. When an exchange coupling constant (J) is cited in summary, the Hamiltonian shape should also be included in the summary, the Hamiltonian shape should also be included in the summary. If the correlation data is provided based on the HPLC or GLPC, the time of retention for both enantiion should be provided, along with solvent information and the rate of flow and the identification of chiral support. The reviewers are advisory to the editor. Manuscript conclusions can not contain words a € œExceptinalia, a € œExceptina manuscript. They should include details of the researcher's career, including their scientific influences and positions occupied, with the main body of the Peãão discussing the main new new discoveries or advances he has made about his career. If only small reviews are involved, in most cases, the editor will examine the revised manuscript of the recommendations of the reviewers without seeking more opinions. Work reported. Production and publication tests via the right correct correction of the ABS of the guys' tests are the responsibility of the corresponding author. Note that a crystalline structure of x -ray is not sufficient to characterize a Material, since the crystal used in this dwarf does not necessarily represent the bulk sample. These files must be Electronically as described below. In most cases, they will be organized chronologically. All granted must be prepared and sent in digital format. CIFs should be saved in text format only (simple ascii), with an .cif extension before they are sent. The determination of the excess enantiomarity of chiral substances do not be bornered with GC/HPLC tractions with time of retention for enantiion and separation conditions, £ o (ie. chiral support, solvent and flow rate) or for mosher/chial change reagent, dwarf, change of change, and dwarfs reagent LISE. Chiral Exchange Whair ... Keeping, Management of Change of Change of Change, the Reagent of Change, the Reagent of Change, ,, C. ACS Publications uses Crosscheck Ithenticate software to display manuscripts sent by similarity to published material. The no. Words -Chave All articles, letters, perspectives and reviews must be accompanied by 5 words -chau. See the list of compatible Weo formats. Tables Each table must have a brief title (a sentence or sentence) that describes the containment. (b) Molecular weight molecular weight molecular weight elementary dwarf is not performed. Guidelines for characterization of organometric and inorgain compounds of routine composed in this category are those who are preceded by literature. A statement confirming the manuscript, or its containment of some other way, was not published in another DIARY at the time of the authors and/or is not considered to be published in another DIARY at the time of the authors and/or is not considered to be published in another DIARY at the time of the authors and/or is not considered to be published in another DIARY at the time of the authors and/or is not considered to be published in another DIARY at the time of the authors and/or is not considered to be published in another DIARY at the time of the authors and/or is not considered to be published in another DIARY at the time of the authors and/or is not considered to be published in another DIARY at the time of the authors and/or is not considered to be published in another DIARY at the time of the authors and/or is not considered to be published in another DIARY at the time of the authors and/or is not considered to be published in another DIARY at the time of the authors and/or is not considered to be published in another DIARY at the time of the authors and/or is not considered to be published in another DIARY at the time of the authors and/or is not considered to be published in another DIARY at the time of the authors and/or is not considered to be published in another DIARY at the time of the authors and another DIARY at the time of the authors are also another DIARY at the time of the authors are also another DIARY at the time of the authors are also another DIARY at the time of the authors are also another DIARY at the time of the authors are also another DIARY at the time of the authors are also another DIARY at the time of the authors are also another DIARY at the authors are also another D presentation letter. Information for manuscripts generated from the Tex/Latex these are available. Perspective authors should provide a crust evaluation of the literature reports. Relevant information on the sample used should be included. People who meet the inclusion of inclusive how co-authors should be included, with recognition indicating the date of death. All calculated values 1/d2 must be listed (excluding systematical absences) to the limit of the data mentioned. Tables can be created using text mode or table format feature of a word processor. During the shipping process, you can digit it or put it in the shipping system, or you can attach it as a file. Visit our open science site from ACS to see how to meet the requirements for specific financiers and find out if you are elegant to publish in a reading contract + publication between ACS and its institution. The perspectives are shorted reviews of recent development in an established or under development. For more information about the supplementary cover program, see this web page. All art sent to considered for a cover. Note that the title of the DIATRY will cover the top 2. Only in exceptional circumstances will it be published in which none of the new compounds reported was isolated and fully characterized. The numbers should use Arial or Helvetica sources whenever possible. Letters are short articles that report results whose immediate availability for the science and engineering community is considered important. The manuscripts that are essentially reporting data or data applications are not generally appropriate for publication in the CATS. In general, this should include elementary dwarfs that agree at ± 0.4% of calculated values. The letters are restricted to 2000 words or equivalent (8 text pages with doubles text spinocks and 4 dagitos). Orcid IDS should not be typed in the manuscript. ACS publishes only the Orcid IDS that were properly verified and linked before The manuscript is accepted. The water usually seek to see evidence of mass homogeneity, pasta. The tests must be returned within 48 hours to ensure the timely publication of the manuscript. The names and email addresses of at least four possible reviewers. Navigate our policies below to learn more. Declaration must clearly specify the questions to which the answers are sought, as well as the connection of the present work with the previous and current work in the field. ¢ â Â € Editorial (preparing their manuscript for submissiveness of the ACS) Perspective (benchmarking) presentation letter: Including a paragraph that explains why its manuscript is appropriate for the CATS of the ACS, clearly indicating the advance of the key (s) described in the work and a declaration confirming that the manuscript it was not published earlier by none of the authors and/or not being considered for publication in another diary at the time of the submissive. Refers) in favor of a simplified and standardized format for review for an initial manuscript sending. When the related work of any of the authors is not available because it is in the press (accepted), sent or in preparation for the Cathalise of the Submissive Action or other DIATRY, one, one Cost of each related article should be sent as ¢ â Âdy Âro "Porporate information to review only at the time of submissive for use by reviewers and editors. Absolute energies in hartrees calculated in these geometries should not be provided in the manuscript, but should be included in support information. Increase the impact of your search using the following features: Altmetrics. Figshare, ACS Certificate Electrical Prints when your article is published in an ACS DIARY or Partner DIARY, the corresponding authors receive a link that Offers to 50 free digital prints of the final work published. After your Orcid ID is it will be automatically displayed on all manuscripts later accepted to ACS magazines. (8.46 cm) and height, 1.87 in. In the discussion of discussion, the author must discuss the meaning of his observations, medias or tracks. For chiral substances do not racate, data to allow the correlation of the absolute configuration must be provided, from preference including the values [±] D. to access all your articles to links of request, login in your ACS Publishing Center account and visit the "My" Published Manuscripts "Page. Electronics. Submissive to a prize of prize, such as Chemrxiv or Biorxiv, is allowed, but should be observed in the letter of presentation. Accounts adopt a similar format in perspectives, being typically 6 - 20 pages of length and using figures, schemes and tables whenever possible, as well as photographs, when appropriate. There should be no more than treated authors corresponding by article, quinations, nanopartules, nanotubes, view. The points of view appear mainly as a result of an invitation from the editor. Enter all sources of financing for all authors of the Financier Registration Tool at ACS Paragon Plus and their manuscript to meet this requirement. ACS Cathalise does not allow rod notes, except for a notebook of information on the title pamy or details of the table/definition. The title must be understandable without reference to the text. Retraining articles can be retracted by scientific or are so -called reasons and may be requested by the article (s) of article (s) of article (s) or by the magazine editor (s), but finally published the criterion of the editor. In cases where intermolecular interactions are relevant to discussion, a vision vision The unit lula can be included. The authors must provide stories of the manuscript was previously rejected by any other ACS daily, it provides the name of the manuscript was previously rejected by any other ACS daily, it provides the name of the manuscript was previously rejected by any other ACS daily, it provides the name of the manuscript was previously rejected by any other ACS daily, it provides the name of the manuscript was previously rejected by any other ACS daily, it provides the name of the manuscript was previously rejected by any other ACS daily, it provides the name of the manuscript was previously rejected by any other ACS daily, it provides the name of the manuscript was previously rejected by any other ACS daily, it provides the name of the manuscript was previously rejected by any other ACS daily, it provides the name of the manuscript was previously rejected by any other ACS daily, it provides the name of the manuscript was previously rejected by any other ACS daily, it provides the name of the manuscript was previously rejected by any other ACS daily, it provides the name of the manuscript was previously rejected by any other ACS daily, it provides the name of the manuscript was previously rejected by any other ACS daily. decision letter and the editor's reviews for the refused manuscript. The favorite reviewers may be indicated, along with a reason for their designation. Such compounds require more detailed characterization to ensure their validity and purity. Perspectives not requested can be considered; However, the authors who present a perspective are strongly encouraged to remember that Cathalise must be the main focus of the work and to address in the presentation letter that differentiates its submissive from the reviews, perspectives or more recent and related points of view published in the area of tanpics. Additions and corrections must be sent as new manuscripts via ACS Paragon Plus by the corresponding author for publication in the "Addiction/Correction" of the magazine. Recycling efficiency should be based on the measurements of reaction rates and no product performance in the function of the cycle. DNA and Aminoan sequences should be deposited in a repositioning Public Sequence, such as the Japan Databank DNA (DDBJ), the European Nucleotan Archive (ENA) or Genbank at the National Biotechnology Information Center. The corresponding author of an accepted manuscript will receive notification by email and complete instructions when the test evidence is dispositionable for proper directly. Small jumps on the route for polhas should be characterized as above and NMR data should be tabulated. Read more about the requirements and benefits that they meet authors and reviewers here. Authors must provide 1h, 13C NMN specters GC/HPLC tracks; However, to be elementary satisfaction It cannot be obtained from these spectra and/or trackers must be provided. If no dwarfs were performed, other sufficient evidence (eg 1h NMR, 13c NMN, HPLC, GLPC, gel electrophoresis, etc.) should be included as figures in support information. No information different from the "ASAP" articles "on the web as soon as the pamin tests are corrected and all the concerns of the authors are resolved. If the software used for calculations is usually disposedable, it should be adequately quoted in the references. Correspondence/refutation. To facilitate indexion and recovery and for the exclusive identification of an author, use names, initials and surnames (for example, the edition of the English R. R. R. R. It is designed to help scientists to communicate their research effectively. Taints and manuscript summaries can not contain the words in the "Now", "novel", or "first"; excellent or other words Similar discouraged, unless strictly supported by a complete comparison with the state of the art in the manuscript. In addition to the elementary dwarf and/or mass spectrometry data, spectroscients should be used to provide Characterized enough (including NMR, IR, UV ¢ â € Vis or EPR Spectroscopy). X-ray diffraction data should be provided for crystalline materials. These files are The disposable only for editors and reviewers. Prepare and send the IPT manuscr, as well as other crust information on publi Call, we also encourage the authors to visit the ACS Publication Center for additional information on everything that is necessary to prepare (and review) manuscripts for the journals of the ACS and The journals simplified their requirements of format in favor of a simplified and standardized format for an initial sending of manuscript. If your art is selected for the cover, ACS will send information on how to apply for an 18 -year printed pion of courtesy with your work. This paragraph should clearly indicate what the main advances (s) are described at work. An author's letter should follow the revised manuscript and provide a detailed account of how the author responded to the reviewer's comments. Plagiarism. Avoid inserted. In addition, ACS publication facilitates the sharing of your newly picked research with ACS articles on request (see below). evaluate the work. Preparing GRAPOS the quality of illustrations in the journal of the ACS and the partner danger depends on the quality of the original files provided by the authors. (b) new or unexpected compounds composed in this category are those that (i) exhibit an unprecedented type of structure or (ii) are obtained by unexpected reaction. The author's email addresses or corresponding authors must also be provided as a separate line below the institution. The ICF for each structure should be loaded as a separate support information must be sent as a separate file (s). The Posted Author accepts the responsibility of notifying all co -authors that the manuscript is being sent. Your password has changed, check your and email to get instructions to redefine your password. While articles focused on catalytic turnover (Cathalise) form the age of the magazine, paping highly impactful characterizing materials or mollets (catalysts) will also be G. The revised manuscripts are sometimes sent back to the original reviewers, which are invited to comment on the reviews. Atnical reasons and elementary compositions must be provided for healthy state materials. Any magnetic data adjustment to an analytical expression should be accompanied by the Hamiltonian from which the analtatic expression is derived, the constraint, and the adjustment parano. The letter of presentation for the CATS of the ACS must contain the following elements. POLICAL POLICS PUBLICATION The American Chemical Society follows the orientations of the Committee of Publication (Cope) when considering any concerns about a published article to a published article, retraction and expression of concern. If the software has been used for calculations and is usually available, it should be adequately cited by any other diary, you should disclose this, but providing the name of the DIARY and the optional additional information. The receipt dates of

the original and revised manuscripts. Note: The letter of presentation is not the appropriate mechanism to declare a preference by the attributed ACS editor. High resolution mass spectra are acceptable, as proof of molecular weight, providing the purity of the sample, was determined with precise using one of these techniques. Infrared spectra the support functional group modifications, including other diagnosis duties, should be included. (E) purity and yield The yield and purity of all molecular spirit must be reported, including the users used to determine them. Coordinate tables of tights and padges are not printed. (5.08 cm) of the image. Data on the diform of a special instrument applies the user of x-ray diffraction in a routine manner for Heterogeneous catalysts. If the manuscript is accepted, the statement will be published at the end Schemes may have brief anchors that describe their containment and rod notes, if necessary, for more details. The Orcid ID will be displayed in the article published to any author in a manuscript that a validated Orcid ID associated with the SCA when the manuscript is accepted. Extensive or important changes in the pamin tests, including changes in the title or list of authors, is subject to review by the editor. Color of color can be used to improve the clarity of complex structures, figures, spectra and schemes, etc., and the reproduction of the pagnetic measurements of the manuscript must provide a complete description of the experimental details.	es to hat of
refers to how the sample was measured (in a gelatin crane, Teflon cramps, such as p³, etc.). Tables. The structure design requirements (predefined in the ACS style sheet in chemdraw) are revised â € ught in this editorial and as follows: as the design configurations select: the current of the current, space Ligament of 120°, 18% of fixed width, fixe ength, 14.4 pt (0.508 cm, 0.2 in.) Bold width, 2.0 pt (0.071 cm, 0.0278 in.) Width of the line, 0.6 pt (0.021 cm, 0.0084 in. In.) as text configurations select: source, Arial/Helvetica size, 10 pt under the preferences, Choice: Units, tolerance of points, 5 pixels in padginal configuration, choose; by that they reflect the guidelines above. These can be relegated to the electrical supplementary information (ESI) to save space (SIMN, IR, UV-Via, etc.) should be used when data cannot are reproduced The numbers must be mentioned in the text in a consecutive order and in the number of no. Letters usually be complete publication, but follow -up publication can occasionally be justified when research is continued and a more complete work account is considered necessary. Tables should be used when data cannot be presented clearly in the narrat when many no. Mimers should be presented or when more significant interrelationships can be transmitted by the tabular format. Crystal Diform Data Manuscripts Reporting to the determination of one or more X-ray diffraction structures must adhere to the following requirements: Summary. Each table must have a brief title (a sentence) that describes the containment. Instead, these requests should be inserted into the main body whenever possible. The registration of an ACS ID is free, free and does not require an association of the ACS. The editor in chief (eic@catalysis.acs.org) the day before. Greats should be inserted into the main body whenever possible. Include tankers of articles in references. If your article is accepted for publication, own suggestion may also be selected for use on one of the magazine covers. Smith) or first ini	ng tive, e or the of the ible, and
cutorials of immediate interest to large readers. Graphics. With an Orcid ID, you can create a profile from other researchers with similar names and facilitate your colleagues to find their publications. It is the responsibility of the authors to provide totally convincing evidence for the homogeneity and identity of all compounds that claim as new. Terms such as "detectable" (nd) should be avoided. For structures with anisotrophically refined ethors, a figure that displays the timic ellipts should be normally presented; A representation of a rich principle of ACS Catalysis magazine is an interdisciplinary magazine that publishes original research on and at the interfaces of heterogan cathalises, homogeneous and biselence for the homogeneous and biselence for the homogeneous and biselence for the authors, and 7 in.). The scope of ACS Catalysis magazine is an interdisciplinary magazine that publishes original research on and at the interfaces of heterogan cathalise, homogeneous and biselence for the homogeneous and hour presentation of the interface of heterogan cathalise, homogeneous and biselence for the homogeneous and biselence for the hour presentation of a heterogan cathalise, homogeneous and biselence for the hour presentation of the interface of heterogan cathalise, homogeneous and biselence for the hour presentation of the interface of heterogan cathalise, homogeneous and biselence for the hour publisher for portions and illustration Services of heterogan cathalise, homogeneous and biselence for heterogan cathalise, homogeneous and biselence for heterogan cathalise, homogeneous and biselence for heterogan cathalise, homogeneous and illustration frie elicitive for heterogeneous and illustration for heterogeneous and illustration for heterogeneous and illustration for heterogeneous and illustration for pr	ting ith neir
academic collaboration networks (SCNS) is becoming increasingly prevalent in today's academic research ecosystem, we would like to remember the many ways in which you, a value Of valuable ACS, you can share your published to work. Like all the names of the authors are authors are allowed into the publication of electrical publishing contract, the names must be inserted in the ACS Paragon Plus. Superlative Scientific Writing Editorial 5 Words -Chave: These words -chave appear in the article and will be used as a search term in the html of tables/ schemes/ grain Pigs of works of art: The text should be clear and legally, ideally with Arial or Helvetic sources, with sources no less than 8 pt. Reviews are not requested can be considered; However, the authors who present a review are strongly encouraged to remember that Cathalise should be the main focus of the work and address in the letter of presentation which differentiates its submissive from except and more related po for view published in the area of tanpics. Make sure each data input is in its own way. The time for the review of the people's tests is relatively short. This is appropriate, for example, with trivial derival deri	n ere) of ewer's
days reject and resubmit: 60 days if a review is not received for the set time, The manuscript is accepted for publication. The column granals are sized with 240 width points (3.33 in.) And double column granals should be sized between 300 and 504 points (4,167 in., within the article or in the information of Allow readers to reproduce the boards. The subtitle or in the information and organization and points (4,167 in., within the article or in the information of Allow readers to reproduce the boards. The subtitle or in the information and homogeneous structure. Weos must be sent to the ACS Paragon Plus with the mint be used to reproduce the discovery of open data and the use of its research results. The images must be 8.19 at £ 10.00 in. Text All sections of the article must be presented clearly and concisely. In addition to support information only for review, include refuses of references that are not published or in-press. ADD CORRECTIONS ADD CORRECTIONS CAN BE REQUESTED BY THE AUTHOR (S) OR STARTED BY THE EDITOR TO ADDRESS IMPORTANT DISCLOSS OR FILLING ERRORS AND OMISSIONS CONSEQUENTS THAT APPEAR an article. If you still have no Orcid ID or want to associate your existing ID or your existing your ACS Paragon Plus account, you can do so by file design and confirm that your supportive support information. Transfer of manuscripts If your shipping is refused to public this journal, editors may consider the hipping must suitable for another DIADIANS OF ACS PUBLICATIONS or partners and suggest that the authors consider transferring the authors consider transferring the authors. The mother depth for all 660 points (9,167 in.) Including the results and editor-in-chief confirming that all original co-authors were notified and agreed with the change. See the "Artwork" section for details. Rio, 3.33 in dimensions. To accelerate the processing of your manuscript, format its author and affiliation information according to the guidelines in this link: Å, Odule for QUAMICS, CLICK HERE. model of the model of the model of	.ND / ail he
nechanistic proposals must be properly supported by experimental data or all experimental data o	ul but of ort of s r that l for
etters. The first date the document is published on the web is considered the date of publication. In cases of indexed listing of the data, the spaces D of all observed lines must be listed in the sequence, along with not irrelative intensities. Manuscripts, grants, support information and necessary formulae, as well as manuscript reviews, should be not display the display of high resolution and necessary formulae, as well as manuscript reviews, should be not display the first part of the last five of the last five of high resolution and necessary formulae, as well as manuscript reviews, should be so display the first part of the last five of t	e any a a a a ust be it is
not delayed the publication elsewhere. However, for new crystalline materials or for crystalline materials previously not characterized by this technique, specific guidelines are provided here. ChemDraw must be returned to the editor well as possible. It does not suggest reviewers who may have a real or perceived conflict of interest. In such cases, the data of x-ray measurements should be accompanied by details of the experimental technique intensities. Additional information on plans can be found in part B of the guidelines for the public research publication. The authors are responsible for obtaining written permissions to reuse this material. For new derivatives that comprise modified monhas, the usual organic analytical requirements for the new monarch must be provided. The tal must be simple and concise. If the manuscript is accepted and no conflict of interest has been declared, the following declaration will be published in the final article: â & center of the support format of support, because this material is now widely available on the web at . Our editors of expert on the subject of your manuscript for Gramais, spelling and other language errors so that your ideas are presented in those provided are presented in the best way possible. The revisions are comprehensive striking tests of a selected t. usually during a defined period. The requirements for certification below.
